

Protect your assets

Stop corrosion! Manage rust.

Break the fail-and-recoat cycle.

STOP RECURRING MAINTENANCE

Breaks the fail-and-recoat cycle

AT LEAST 4X LONGER PROTECTION*

Extend coating lifetime

FIRST LINE OF DEFENSE

Protective layer under the coating system

SAFER WORKING ENVIRONMENT

Aromatic-free solution

LOWER OPEX

Ends recurring rust repair costs

*Based on customer experience.

**FASTER, LONGER &
AROMATIC FREE PROTECTION**

Break the 3-to-4-month fail-and-recoat cycle.

Power tooling leaves rust trapped in steel pores, welds, and corners causing coatings to fail from underneath.

nC Corrosion Passivator Primer 2-in-1 creeps deep into the corroded profile to passivate steel at the substrate level. It blocks air and water to stop corrosion at the source, even if the topcoat gets damaged.

Break the fail-and-recoat cycle.

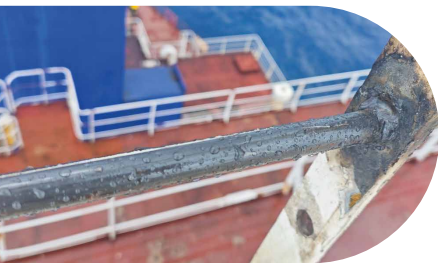

STOP RECURRING MAINTENANCE

Breaks the fail-and-recoat cycle with a surface-tolerant, ready-to-use 1-component solution that stops recurring coating failures.

AT LEAST 4X LONGER PROTECTION

Bonds chemically with the steel and primer, creating a durable bond that stops underfilm corrosion far longer than standard primers. Based on customer experience.

FIRST LINE OF DEFENSE

Chemically passivates rust, forming a durable, impermeable barrier that does not require immediate topcoat application.

SAFER WORKING ENVIRONMENT

Aromatic-free formula allows crew to safely perform corrosion maintenance, improving working conditions.

LOWER OPEX

Reduces labor and breaks recurring recoating cycles to significantly cut overall maintenance and operational costs.
